# Coding Project for Homes.com Developer Candidates

## Task Objective

Create an application that will use Giphy's API to display to the user a slideshow display of animated images. The slideshow should have controls that control the navigation of the shown image to either the previous or next image. There should be an input box that allows a user to control the search term that is used to search for animated gifs.

Submit as a GitHub repository an application that meets the following requirements.

- Use Node.js for the back-end web server
- Use Angular.JS as the front-end framework
- Use the Public Beta Access Key,
  https://github.com/Giphy/GiphyAPI#access-and-api-keys
- Can be run on any machine with Node.js and NPM
- Use the web-server to return the angular application
- Any additional modules/libraries may be used
- Default the search term to be "pugs"
- Use promises
